BioSensors Goes Live On Agile Advantage 2005

Salt Lake City, UT – April 20, 2006 - Domain Systems, Inc. announces the successful implementation of yet another Agile Advantage implementation at BioSensors International Group, Inc. BioSensors purchased Agile Advantage 2005 from Domain late last year for their PLM solution. The entire implementation took place in less two than months.

With multi-national company facilities in the USA, Netherlands, Singapore, Switzerland, and Japan, each site required access to product data in real time. Areas of productivity improvement focused around promotion of efficient communication of product data across sites, alignment of configuration management and document control practices and policies, elimination of lost time in delivery of engineering documents or information, visibility into the ECO process along with real time status, alignment of ISO-9000 and GMP practices for future certification along with several other factors.

Domain was selected by BioSensors based on the demonstrated track record of successes that the BioSensors' project selection team researched during the buying process. Says PLM Director Mario Diaz, "Domain Systems' expertise and industry respected technicians and engineers were key factors which resulted in the award of the contract to Domain Systems". Mario further explains that after quality checks, the system went live in January 2006. "There have already been process improvements" he states. "The company is already considering broadening the scope of the implementation of another business unit of the company"

About Domain Systems, Inc.

Founded in 1996, Domain Systems, Inc. is an information technology systems integrator, software developer and engineering consulting organization providing leading edge consulting, implementation, integration, customization, deployment and support of enterprise content management (ECM), collaborative manufacturing commerce (CMC), product data management (PDM), Supply Chain Management (SCM) and document/content management (DM) systems. In addition, the general Contract Services division has highly skilled personnel with various consulting, project management, programming and implementation expertise. Domain Systems is a privately held company headquartered in Salt Lake City, Utah with additional offices located at various locations around throughout the US. Domain Systems provides comprehensive consulting coverage across the U.S., Canada and Europe. For more information, visit the company's Web site at www.domainsi.com.

About Biosensors International Group, Ltd.

Biosensors develops, manufactures and markets innovative medical devices used in interventional cardiology and critical care procedures. Biosensors is well-positioned to emerge as a leader in drug-eluting stents, an evolving therapy that is rapidly gaining market share from traditional therapies such

as bare-metal stenting and open-heart surgery. Biosensors has internally developed technology to address each component of a drug-eluting stent system, including a stent, a stent delivery catheter, a bioresorbable polymer and a proprietary anti-restenotic drug. It is pursuing two separate drug-eluting stent programs, *BioMatrix*[™] and *Axxion*[™], and has licensed aspects of its drug-eluting stent technology to four companies.
