

ERP Application Adaptors for Agile Users

Domain Systems offers a line of ERP Application Adaptors that are designed for companies who require integration of Agile™ Product Collaboration to their ERP system. Our base adaptors provide a rich set of functionality without the need for user intervention.

The base adaptors typically provide for transferring Item Master and Bill of Material information from Agile into your ERP system.

- Other Customizations
- Additional Attributes
- E-mail Notification
- AML Data
- Base Adaptor:
 - Item Master
 - Bill of Material

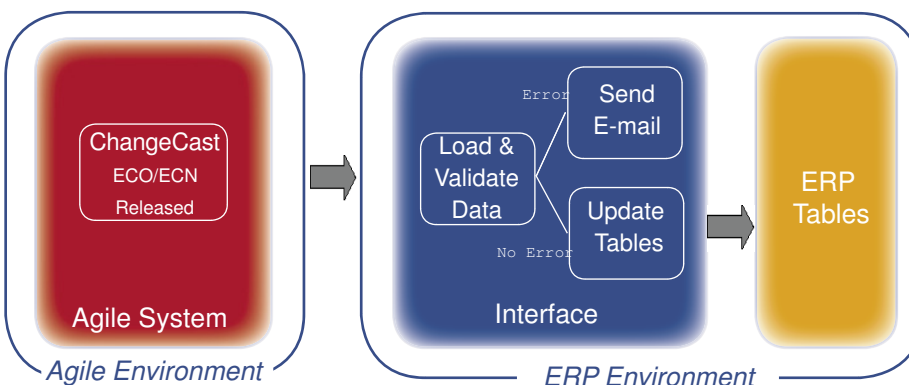

Add on modules can be packaged to enhance the business critical information being passed from one system to another. Add-on modules may include AML, E-mail notification, ECO/MCO, bi-directional data or other custom functionality.

Functional Overview

The adaptor interface reads an ASCII file generated by Agile's ChangeCast whenever a change order is released. The Adapter analyzes the ASCII file, performs an error check, then populates the ERP database. File transfers are performed via FTP (TCP/IP).

The adaptor interface can be scheduled to execute at specified intervals based upon your requirements. It looks for input files at specified locations. Upon finding data files, it loads the content of the data files into the ERP tables.

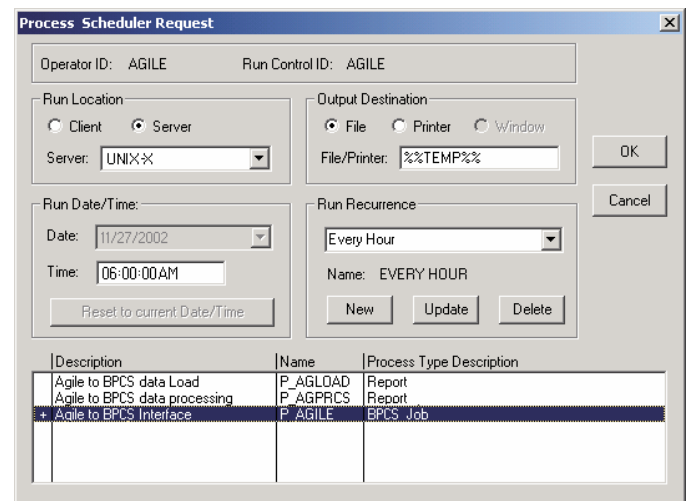

The adaptor interface can be scheduled to execute at specified intervals based upon your requirements. It looks for input files at specified locations. Upon finding data files, it loads the content of the data files into the ERP tables.

The e-mail notification module (diagramed above) sends data first to temporary tables and copies the input files to a backup location. The loaded content is validated against the ERP tables to ensure data integrity. If the data is found to be free of errors, the ERP tables are updated and the data is deleted from the temporary table. If the data is found to have errors or warnings an e-mail is sent to specified users with an attached error log file.

Adaptor Benefits

- Saves money by reducing need for duplicate input
- Leverages existing IT investments
- Enhances business opportunities by providing timely, business-critical information
- Accurate data exchange
- Easily configurable and customizable
- Reliable and easy to use

Base Product Package

- Includes:
- On site installation
 - Documentation
 - Training

Add-on modules

- AML information
- ECO/ECR/MCO
- Additional attributes for Item Master or BOM
- E-mail notification
- Bidirectional data exchange
- User requested customizations

Agile Link-to-JDE
This adapter provides functionality for transferring item and BOM data from Agile to Oracle/JD Edwards™ ERP systems.

Agile Link-to-Macola This adapter provides functionality for transferring item and BOM data from Agile to Macola™ ERP systems.

Utility Adaptors

Universal Batch Update Adapter
Batch load/update item master data or manufacturer parts data from external ERP systems into Agile. You may use it to update item master records with new product lines, cost and other page 2 or page 3 information.

Batch File/Image Extractor
Executes in batch to extract items with attachments into an index file and exports attachments from Agile/iFS to a specified directory.

ChangeCAST/BOM Post Adapter
Integrated with ChangeCAST to retrieve BOM item revision prior to sending the AGL file to the ERP.

ChangeCAST/Page 3 Post Adapter
Now you can send page 3 attributes to your ERP system - integrated with ChangeCAST to retrieve any Page 3 attributes from the item master table in Agile prior to sending the AGL file to the ERP system.

Need Your Application Integrated?

No one has integrated from Agile to as many other third party application systems as we have. Talk to us about your integration requirements, chances are we've seen it, done it or at the least will know how to best accomplish it.
