

Domain Systems – Agile/Link to Glovia™ Application Adapter

Agile™ to Glovia™ ERP Connectivity

The Domain Systems' Glovia Application Adapter is for customers who require integration of Agile Anywhere™ to their Glovia™ ERP system. Domain Systems' Glovia™ adapter transfers item master and bills of materials data from Agile without the need for user intervention.

The Agile to Glovia Import Adapter is designed to provide a simple, low maintenance and intuitive user interface to import and maintain inventory item and bill of material records from Agile to Glovia.

The Glovia™ Adapter processes item master data, BOM and AML data, then automatically notifies the change analyst of any errors. The system is based on the premise that ALL inventory transactions will be managed through Agile.

What does our Glovia™ Application Adapter do?

Agile Anywhere™ includes a suite of client applications for product configuration management and engineering change control within the supply chain. Agile's ChangeCAST™ is an interface to enterprise resource planning (ERP) systems.

ChangeCAST converts ECO data into a pre-defined file format. Our Glovia™ adapter maps data from ChangeCAST. It can be used out-of-box or configured to meet the customer's ERP application requirements.

An internal system agent imports data from the Agile transfer file and loads it into Glovia™ upon command. The system agent in effect patrols for new data and ensures synchronicity between the Agile database and Glovia™.

Additionally, our Glovia™ Adapter is integrated with Domain Systems' BOM Post Adapter product to retrieve the BOM item revision from Agile.

The Glovia™ adapter runs on Glovia.e™ version 5.1

Key Benefits

- Eliminates the need for custom code to transfer information from Agile to Glovia™
- Saves time and eliminates costly errors associated with manual updating
- Instant e-mail notification is delivered to the change analyst of any errors
- Reliable and easy to use
