

Link-to-MAPICS Application Adaptor for Agile Users

Domain Systems' Link-to-MAPICS Application Adaptor is designed for companies who require integration of Agile PLM products to their MAPICS™ ERP system. Our Link-to-MAPICS adaptor transfers Item Master, Bill of Material and AML information from Agile to MAPICS without the need for user intervention

Functional Overview

Agile PLM includes a suite of client applications for product configuration management and engineering change control within the supply chain.

Agile's ChangeCAST™ is an interface to enterprise resource planning (ERP) systems. ChangeCAST converts ECO and other data into a predefined file format. Our MAPICS adapter maps data from ChangeCAST and can be used "out of the box" or configured to meet the customer's ERP application requirements. The adapter also works with Agile AIS which translates XML directly into MAPICS.

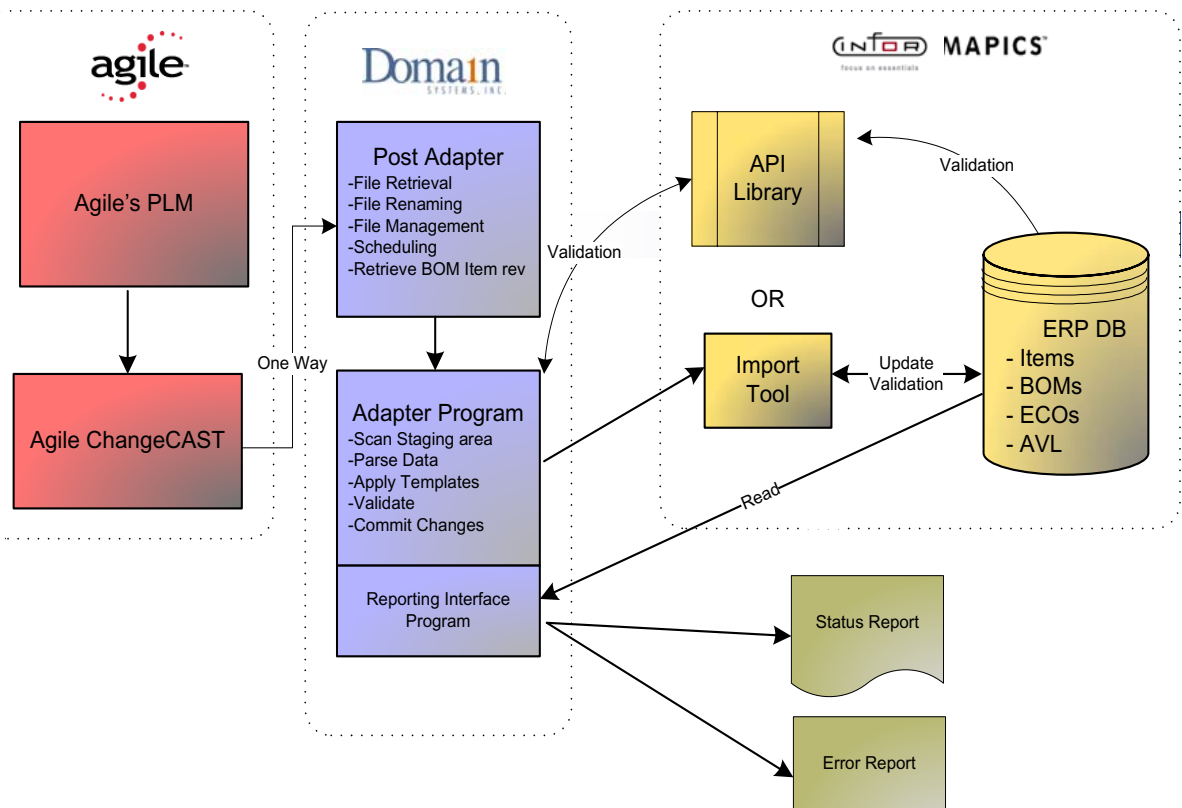

An internal system agent imports data from the Agile transfer file and loads it into MAPICS upon command. The system agent in effect patrols for new data and ensures synchronicity between the Agile database and MAPICS.

In addition, our MAPICS adaptor is integrated with Domain's BOM Post Adapter product to retrieve the BOM item revision from Agile. The adapter processes item master data, BOM and AML data and automatically notifies the change analyst of any errors.

The MAPICS adaptor runs on MAPICS/EPDM version XA release 5 and above.

Benefits

- Reduces or eliminates need for duplicate input
- Leverages existing IT investments
- Enhances business opportunities by providing timely business critical information.
- Leverages existing IT investments
- Accurate data exchange with instant error notification
- Easily configurable and customizable
- Reliable and easy to use
