

# Domain Systems ChangeCast/Page 3 Post Adapter

## Enable/Transfer the Item Page 3 from Agile for the ERP

The ChangeCast Page 3 Post Adapter is an extension to the Agile/ChangeCast product, which retrieves item page 3 information and passes it to the ERP system. With Domain Systems' Page 3 Post Adapter, Agile ChangeCast customers are now able to retrieve the item page 3 information from Agile for their own ERP. The Page 3 Post Adapter intercepts the Agile/ChangeCast process and retrieves the **Item Page 3 data** directly from Agile. It also builds and transfers the new file to the ERP system.

The Post Adapter has no run-time user interface and runs completely in **batch** mode or from **ChangeCast**. The Post Adapter will:

1. Read the ChangeCast file and determine if it contains item page 3 information.
2. Retrieve item page 3 for every item in the item data section of the ChangeCast file.
3. Transfer files via FTP to the ERP system.

The adapter transfers the files to any ERP system that is set up for FTP. It runs on an NT server running Agile server with ChangeCast, and it is built around the Agile/SDK MFC technology.

The Admin tool:

The Post Adapter comes with an admin tool to help you set up the configuration that best suits your need.

The adapter's logging capability keeps track of all your error messages in a log file.

### Key Benefits

- **Productized Integration to retrieve item page 3 data from Agile.**
- **Saves time & eliminates errors while transferring critical data to ERP**
- **Reliable and easy to use**

A screenshot of the "Page 3 Post Admin Tool" configuration window. The window has a title bar with "Page 3 Post Admin Tool" and "Copyright Domain Systems". It contains several input fields and dropdown menus for configuration. The "ChangeCast Out directory" is set to "d:\agile\changecast\out". The "FTP temp. directory" is "d:\post\_adapter\ftp". The "Log File Name" is "d:\post\_adapter\ccdsipostlog.log". The "Agile User/Password" is "agile/agile". The "ChangeCast extension" is "AGL" and the "License Key" is "111-2222-3333-4444". There are sections for "File" (File Orientation: HORIZONTAL, Text delimiter: ", Field delimiter: ", Date/Time: Date Format: m/d/yyyy, Time Format: hh:mm:ss) and "FTP" (Enable FTP: checked, Host: host, User: anonymous, Password: password@xyz.com). There are "Test Connection", "Save", and "Cancel" buttons at the bottom. A Domain Systems logo is visible in the bottom right corner of the window.

**Key Features:**

**System Requirements**

- Based on Agile /SDK & MFC technology assuring future compatibility and easy maintenance.
- Easy administrative interface to set initial parameters and run time settings.
- Integrated with Agile's ChangeCast product.
- Administrative features include: transaction and error logging.
- Simple installation

Domain Systems Page 3 Post Adapter is an add-on product to Agile/ChangeCast and includes:

Page 3 Post Adapter Software  
Software License  
Installation Instructions

Minimum Hardware

Pentium II PC  
32 MB RAM  
Network Card  
Enough free disk space for processed files

Operating System

Microsoft Windows NT4.0 server or above

Networking

TCP/IP stack from Agile to ERP systems

Required for Operation

One copy of Page 3 Post Adapter Software  
Agile software

Domain Systems, Inc. is an international information technology systems integrator and software engineering consulting organization. We specialize in the provision of document management services (EDMS), product data management (PDM) with various partners, manufacturing processes and applications, and general technical contract services. While being widely regarded within the industry as the PDM and EDMS integration specialists, Domain Systems maintains a strong industry focus on the Discrete Manufacturing sectors.

The constant trademarks that distinguish Domain Systems from its competitors are the quality of its staff and its application and industry focus. Domain Systems Consulting Services Division provides a comprehensive range of product and services designed to assist clients through the successful deployment of their application whatever focus it may have. Delivered by a team of vastly experienced industry professionals, service offerings include Business and Technical Consultancy, System Design and Implementation, Project Management, Software Customization and Application Development, Training and ongoing Support.
