

Universal Batch Update Adaptor

Updates Agile Title Block, Page 2 and Page 3 Information

Functional Overview

Domain Systems' Universal Batch Update Adaptor is for customers who need to transfer information from any external system to Agile, but do not want to customize and maintain an interface for a specific external system. The Universal Adaptor processes files from the external system, then updates Agile with critical item information such as ERP cost information, product lines, and/or other related system data. The Universal Adaptor uses the latest **Agile/SDK** technology, which helps to ensure future compatibility.

The Universal adaptor has **no run-time user interface** and runs in **batch** mode. It updates existing item master records or creates new items in Agile depending on user-configured options (using the Admin tool).

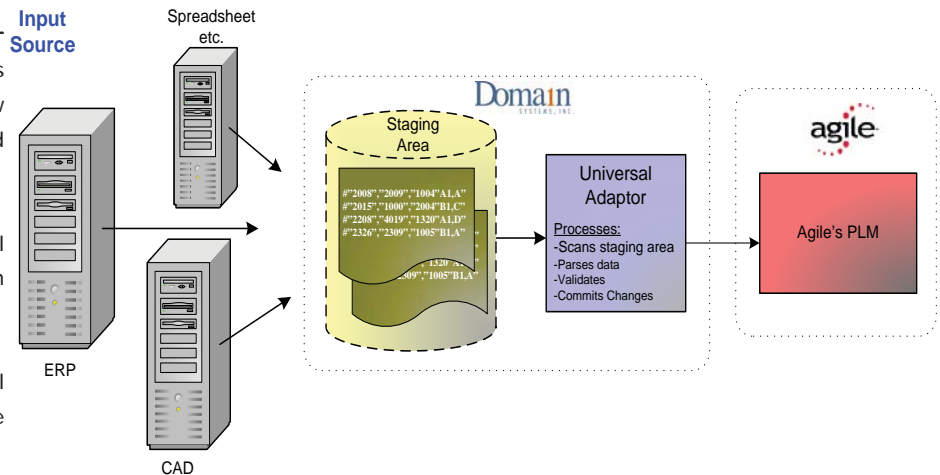

The Universal adaptor works with any external system (ERP, CAD, etc..) as long as the system can produce a text delimited extract file.

The Universal adaptor comes with an admin tool to help you configure the adaptor's run-time settings.

The adaptor's logging capability keeps track of all error messages.

Key Benefits

- Eliminates custom code for information transfer to Agile
- Open architecture allows communication via any system that can extract a text-delimited file of its information
- Saves time by eliminating manual interaction with the introduction of costly errors
- Reliable and easy to use

About Domain Systems

Domain Systems empowers business with ability providing rapid time-to-value strategies and technologies that help clients drive business performance, shorten new product introduction cycles, enhance supply chain collaboration, and manage mission critical content – all while reducing waste, errors and lead time. Domain Systems is laser focused at discrete and process manufacturing with a profound understanding of industry needs.

Domain Systems is an information technology consulting organization, software developer and systems integrator. Headquartered in Salt Lake City, Utah with offices around the U.S., Domain Systems provides comprehensive product and service solutions to hundreds of customers across the U.S., Canada and Europe.
